JABATAN PENDIDIKAN POLITEKNIK  
KEMENTERIAN PENDIDIKAN TINGGI

JABATAN KEJURUTERAAN ELEKTRIK

PEPERIKSAAN AKHIR  
SESI JUN 2015

EC304 : MICROPROCESSOR FUNDAMENTAL

TARIKH : 02 NOVEMBER 2015  
TEMPOH : 11.15 AM - 1.15 PM (2 JAM)

---

Kertas ini mengandungi **SEMBILAN BELAS (19)** halaman bercetak.  
Bahagian A: Objektif (20 soalan)  
Bahagian B: Struktur (10 soalan)  
Bahagian C: Esei (2 soalan)  
Dokumen sokongan yang disertakan : Tiada

---

**JANGAN BUKA KERTAS SOALANINI SEHINGGA DIARAHKAN**

(CLO yang tertera hanya sebagai rujukan)

SULIT

## SECTION A : 20 MARKS

BAHAGIAN A : 20 MARKAH

## INSTRUCTION:

This section consists of TWENTY (20) objective questions. Mark your answers in the OMR form provided.

## ARAHAN:

Bahagian ini mengandungi DUA PULUH (20) soalan objektif. Tandakan jawapan anda di dalam borang OMR yang disediakan.

CLO1  
C1

1. Identify THREE (3) basic components of microprocessor-based systems.

Pilih TIGA (3) komponen asas dari sistem berdasarkan mikropemproses.

- A. Arithmetic logic unit (ALU), memory and input / output  
*Aritmetik logic unit (ALU), ingatan dan masukan/keluaran*
- B. Control unit, register and arithmetic logic unit (ALU)  
*Unit kawalan, pendaftar dan aritmetik logic unit (ALU)*
- C. Microprocessor, memory and input / output  
*Mikropemproses, ingatan dan masukan/keluaran*
- D. Control unit, register and memory  
*Unit kawalan, pendaftar dan ingatan*

CLO1  
C3

2. 7 gigabyte is equivalent to :

*7 gigabait adalah setara dengan :*

- A.  $7 \times 1024$  Byte  
 *$7 \times 1024$  Bait*
- B.  $7 \times 1024$  Kilobyte  
 *$7 \times 1024$  KiloBait*
- C.  $7 \times 1024$  Megabyte  
 *$7 \times 1024$  MegaBait*
- D.  $7 \times 1024$  Terabyte  
 *$7 \times 1024$  TeraBait*

- CLO1  
C2
3. Which of the following are the THREE (3) basic sections of a microprocessor unit?

*Antara berikut yang mana adalah TIGA (3) bahagian asas unit pemproses mikro?*

- A. Operand, register, and arithmetic / logic unit (ALU)  
*Kendalian, daftar dan unit arithmatik / logic (ALU)*
- B. Control and timing, register, and arithmetic/logic unit (ALU)  
*Kawalan dan masa, daftar, dan unit aritmetik / logik (ALU)*
- C. Control and timing, register, and memory  
*Kawalan dan masa, daftar, dan memori*
- D. Arithmetic/logic unit (ALU), memory, and input/output  
*Aritmetik / unit logik (ALU), memori, dan input / output*

- CLO1  
C1
4. Microprocessor is the \_\_\_\_\_ of the computer and it perform all the computational tasks

*Mikropemproses ialah \_\_\_\_\_ komputer dan ia melaksanakan semua tugas pengiraan*

- |                            |                                |
|----------------------------|--------------------------------|
| A. main<br><i>utama</i>    | C. important<br><i>penting</i> |
| B. heart<br><i>jantung</i> | D. simple<br><i>mudah</i>      |

- CLO3  
C1
5. The process of finding and correcting error within a program is called :

*Proses mencari dan memperbaikkan kesalahan di dalam aturcara dikenali sebagai:*

- A. assembling  
*'assembling'*
- B. compiling  
*'compiling'*
- C. debugging  
*'debugging'*
- D. linking  
*'linking'*

- CLO3  
C4
6. Choose only ONE (1) question. (Either Motorola OR Intel)

*Pilih SATU(1) soalan sahaja. (Sama ada Motorola ATAU Intel)*

|           |   |
|-----------|---|
| Motorola: | The instruction “SUB,W D0,\$2000” will subtract the data word held in :   |
| Intel:    | The instruction “SUB [2000],BX” will subtract the data word held in :<br><br><i>Arahan “SUB [2000],BX” bermaksud menolak ‘word’ data berada dalam :</i> |

Motorola

- A. D0 from location 00002000<sub>H</sub>.  
*D0 dari lokasi 00002000<sub>H</sub>.*
- B. D0 from location 20000000<sub>H</sub>.  
*D0 dari lokasi 20000000<sub>H</sub>.*
- C. location 00002000<sub>H</sub> from D0  
*lokasi 00002000<sub>H</sub> dari D0*
- D. location 20000000<sub>H</sub> from D0  
*lokasi 20000000<sub>H</sub> dari D0*

Intel

- A. register BX from location 00002000<sub>H</sub>.  
*daftar BX dari lokasi 00002000<sub>H</sub>.*
- B. register BX from location 20000000<sub>H</sub>.  
*daftar BX dari lokasi 20000000<sub>H</sub>.*
- C. location 00002000<sub>H</sub> from register BX  
*lokasi 00002000<sub>H</sub> dari daftar BX.*
- D. location 20000000<sub>H</sub> from register BX.  
*lokasi 20000000<sub>H</sub> dari daftar BX.*

CLO3  
C4

7. The Assembly Language program in table A5 below will execute :

*Aturcara bahasa himpunan di dalam Jadual A5 akan melaksanakan :*

Table A5/Jadual A5

| Motorola         | Intel         |
|------------------|---------------|
| MOVE.W \$2000,D0 | MOV BX,[2000] |
| ADD.W \$2100,D0  | ADD BX,[2100] |
| MOVE.W D0,\$2200 | MOV [2200],BX |

- A. add the values  $2000_H$  and  $2100_H$ , placing the result in location  $2200_H$   
*Tambahkan nilai  $2000_H$  dan  $2100_H$ , letakkan hasil di lokasi  $2200_H$*
- B. add the contents of locations  $2000_H$  and  $2100_H$ , placing the result in location  $2200_H$   
*tambahkan kandungan dalam lokasi  $2000_H$  dan  $2100_H$ , letakkan hasil di lokasi  $2200_H$*
- C. copy the contents of D0/BX into locations  $2000_H$ ,  $2100_H$  and  $2200_H$   
*salin kandungan daftar data 0 kepada lokasi  $2000_H$ ,  $2100_H$  dan  $2200_H$*
- D. copy the contents of D0/BX into locations  $2000_H$  and  $2100_H$ , then load D0/BX from location  $2200_H$   
*salin kandungan daftar data 0 kepada lokasi  $00002000_H$  dan  $00002100_H$ , seterusnya pindahkan daftar data 0 dari lokasi  $00002200_H$*

CLO3  
C2

8. The type of BRANCH which allow the microprocessor to make decisions are called :

*Cabang yang membenarkan mikropemproses untuk melakukan pertimbangan dikenali sebagai :*

- |  |  |
|--|--|
| A. conditional branch<br><i>cabang bersyarat</i> | C. indirect branch<br><i>cabang tidak terus</i>          |
| B. direct branch<br><i>cabang terus</i>          | D. unconditional branch<br><i>cabang tidak bersyarat</i> |

CLO3  
C4

9. Choose only ONE (1) question. (Either Motorola OR Intel).

*Pilih SATU(1) soalan sahaja (sama ada Motorola ATAU Intel).*

|           |   |
|-----------|---|
| Motorola: | After the 68000 has added together the words $FFFF_H$ and $0001_H$ , the Zero (Z) and Carry (C) Flags will display :<br><br><i>Selepas 68000 menambah data 'words' <math>FFFF_H</math> dan <math>0001_H</math>, bendera Zero (Z) and Carry (C) akan menunjukkan :</i> |
| Intel:    | After the 8086 has added together the words $FFFF_H$ and $0001_H$ , the Zero (Z) and Carry (C) Flags will display :<br><br><i>Selepas 68000 menambah data 'words' <math>FFFF_H</math> dan <math>0001_H</math>, bendera Zero (Z) and Carry (C) akan menunjukkan :</i>  |

- |             |               |
|-------------|---------------|
| Motorola    | Intel         |
| A. C=0, Z=0 | A. CF=0, ZF=0 |
| B. C=0, Z=1 | B. CF=0, ZF=1 |
| C. C=1, Z=0 | C. CF=1, ZF=0 |
| D. C=1, Z=1 | D. CF=1, ZF=1 |

10. A sequence of instructions which appear once but may be used several times is called a :

*Urutan arahan yang dipaparkan sekali tapi boleh digunakan beberapa kali dikenali sebagai :*

- A. return  
*'return'*
- B. stack  
*tindan*
- C. main program  
*aturcara utama*
- D. subroutine  
*subrutin*

|              |  |   |  |   |  |              |         |  |         |              |         |            |  |   |

**SECTION B : 30 MARKS****BAHAGIAN B : 30 MARKAH****INSTRUCTION:**

This section consists of **TEN (10)** structured questions. Answer **ALL** questions.

CLO1  
C4**QUESTION 1**

Differentiate between a microprocessor and microprocessor-based system.

**SOALAN 1**

*Perbezaan di antara pemproses mikro dan sistem berdasarkan pemproses mikro.*

[3 marks]

[3 markah]

CLO1  
C1**QUESTION 2**

Give **THREE (3)** differences between microprocessor and microcontroller?

**SOALAN 2**

*Berikan **TIGA (3)** perbezaan antara mikropemproses dan mikropengawal?*

[3 marks]

[3 markah]

For question 3-6, Choose only **ONE (1)** microprocessor (either Motorola OR Intel).

*Bagi Soalan 3-6, Pilih SATU(1)mikropemproses sahaja (sama ada Motorola ATAU Intel).*

CLO3  
C4**QUESTION 3**

Apply 68000 OR 8086 assembly language to build a program using the statements given in Table B3 :

**SOALAN 3**

*Dengan menggunakan bahasa himpunan 68000 ATAU 8086, bina aturcara dengan menggunakan kenyataan-kenyataan yang diberikan di dalam Jadual B3 :*

Table B3/Jadual B3

| Motorola   | Intel   |
|--|---|
| i) start program at address 1000.<br><i>mulakan aturcara pada alamat 1000.</i>   | i) start program at address 1000.<br><i>mulakan aturcara pada alamat 1000.</i>  |
| ii) transfer 8 bit data from register D0 to D1.<br><i>pindahkan 8 bit data dari daftar D0 ke D1.</i>   | ii) transfer 8 bit data from accumulator to BL.<br><i>pindahkan 8 bit data dari akumulator ke BL.</i>   |
| iii) divide unsigned data D1 with D0 and stored data at data register D1.<br><i>bahagikan data D1 'unsigned' dengan D0 dan simpan pada daftar data D1.</i> | iii) divide unsigned words in accumulator by byte in BL and store result at accumulator<br><i>bahagikan 'unsigned words' dalam akumulator dengan byte dalam BL dan simpan di akumulator</i> |
| iv) end program.<br><i>tamatkan aturcara.</i>  | iv) end program.<br><i>tamatkan aturcara.</i>   |

[3 marks]

[3 markah]

CLO3

**QUESTION 4**

C4 Identify the values of register in MC68000/Intel 8086 after executes the instructions below.

**SOALAN 4**

Dapatkan nilai daftar dalam MC68000/Intel 8086 selepas melaksanakan arahan di bawah.

| Motorola: | Register    | Address  | Memory       |
|-----------|-------------|----------|--------------|
|           | D1 44556677 | 00002300 | 1122<br>3344 |
|           | D2 8899AABB |          | 5566<br>7788 |
|           | A1 00002302 |          | 99AA         |
| Intel:    | Register    | Address  | Memory       |
|           | AX 6677     | 00002300 | 1122<br>3344 |
|           | BX 2302     |          | 5566<br>7788 |
|           | CX AABB     |          | 99AA         |

## Motorola

a) MOVE.W #\$2304,D1

D1 : .....

## Intel

a) MOV AX,2304h

AX : .....

b) MOVE.B (A1),D2

D1 : .....

A1 : .....

b) MOV AX,[BX]

AX : .....

BX : .....

CLO3

**QUESTION 5**

C4 Identify the status of flag register (SR) after microprocessor executes instruction in Table B5.

**SOALAN 5**

Dapatkan status daftar bendera (SR) selepas mikropemproses melaksanakan arahan di dalam Jadual B5.

Table B5/Jadual B5

| Motorola  | Intel   |
|---|---|
| <ul style="list-style-type: none"> <li>The initial data D2=667788FF<br/>Data awal D2 = 667788FF</li> <li>MC68000 executes instruction ADDI.W #\$FFFF,D2.<br/>MC68000 melaksanakan arahan ADDI.W #\$FFFF,D2</li> </ul> | <ul style="list-style-type: none"> <li>The initial data AX=88FF<br/>Data awal AX = 88FF</li> <li>8086 executes instruction ADD AX,FFFFh.<br/>8086 melaksanakan arahan ADD AX,FFFFh</li> </ul> |

## Motorola

a) N : .....

b) Z : .....

c) C : .....

## Intel

a) SF : .....

b) ZF : .....

c) CF : .....

**SECTION C : 50 MARKS****BAHAGIAN C : 50 MARKAH****INSTRUCTION:**

This section consists of TWO (2) essay questions. Answer ALL the questions.

**ARAHAN:**

Bahagian ini mengandungi DUA (2) soalan ese. Jawab SEMUA soalan.

**QUESTION 1****SOALAN 1**CLO3  
C4

- (a) The function of assembler is to translate the assembly program into object code before it can be executed. Differentiate between single line assembler and cross-assembler.

*Penghimpun berfungsi untuk menterjemahkan Bahasa Penghimpun kepada kod objek sebelum dilaksanakan. Bezakan antara "single line assembler" dan "cross-assembler".*

[4 marks]

[4 markah]

CLO3  
C4

- (b) The microprocessor contains several group of instructions designed to write source code. Explain briefly the groups of instruction below with the related example.

*Mikropemproses mengandungi beberapa kumpulan suruhan yang direkabentuk bagi menulis aturcara. Terangkan dengan ringkas kumpulan suruhan di bawah dengan contoh yang sesuai.*

- i. Arithmetic Instruction

*Suruhan arithmetik*

- ii. Data transfer/movement

*Pindahan/pergerakan data*

- iii. Logical Instruction

*Suruhan Logik*

[9 marks]

[9 markah]

- (c) Referring to Table C1, answer the questions below:

Table C1/ Jadual C1: The description of program

| Motorola  | Intel   |
|---|---|
| 1. Transfer 8 bit data of \$000000AB into register D1<br><i>8 bit data \$000000AB ke dalam pendaftar D1</i>   | 1. Transfer 8 bit data of ABH into accumulator A<br><i>8 bit data ABH ke dalam akumulator A</i>       |
| 2. Transfer 16 bit data of \$00005678 into register D3<br><i>16 bit data \$00005678 ke dalam pendaftar D3</i> | 2. Transfer 16 bit data of 5678H into accumulator C<br><i>16 bit data 5678H ke dalam akumulator C</i> |
| 3. Transfer 8 bit data of D3 into register D2<br><i>8 bit data D3 ke dalam D2</i>                             | 3. Transfer 16 bit data C to accumulator B<br><i>16 bit data C ke akumulator B</i>                    |

CLO3  
C4

- i. Transform each statement on table C1 to assembly language instruction.

*Tukarkan setiap pernyataan pada Jadual C1 kepada arahan bahasa himpunan.*

[6 marks]

[6 markah]

CLO3  
C4

- ii. Identify the new values of the destination after the instructions in c(i) are executed:

*Kenalpasti nilai destinasi yang terbaru selepas arahan pada soalan c(i) dilaksanakan:*

[6 marks]

[6 markah]

**QUESTION 2****SOALAN 2**CLO2  
C2

- (a) Describe the characteristic of ROM (Read Only Memory).

*Jelaskan ciri bagi ROM (ingatan baca sahaja)*

[3 marks]

[3 markah]

CLO2  
C3

- (b) If given a memory chip with the capacity of
- $2k \times 4$
- , calculate the number of chips required to design a memory of
- $16k \times 8$
- .

*Sekiranya diberi satu cip memori berkapasiti  $2k \times 4$ , hitungkan bilangan cip diperlukan untuk merekabentuk memori berkapasiti  $16k \times 8$ .*

[3 marks]

[3 markah]

CLO2  
C4

- (c) Based on the capacity and the start address given, complete table C2 and develop a memory map if the memory system has 16 address lines and 8 data lines.

*Dengan kapasiti dan alamat permulaan yang diberi, lengkapkan jadual C2 dan bina sistem memori jika satu mikropemproses mempunyai 16 talian alamat dan 8 talian data telah disambungkan ke sistem ingatan tersebut.*

Table C2/ Jadual C2

| Device<br><i>Peranti</i>                  | Size<br><i>Saiz</i> | Address Assignment<br><i>Penempatan Alamat</i> |                        |
|---|---------------------|--|------------------------|
|   |                     | Start<br><i>Permulaan</i>                      | Ending<br><i>Akhir</i> |
| Microprocessor<br><i>Mikropemproses</i>   | 64K byte            | \$0000   | \$FFFF                 |
| RAM<br><i>Ingatan Capaian Rawak</i>       | 12K byte            | \$B000   |                        |
| ROM<br><i>Ingatan Baca Sahaja</i>         | 4K byte             | \$0000   |                        |
| Input/ Output<br><i>Masukan/ Keluaran</i> | 8K byte             | \$E000   |                        |
| Unused<br><i>Tidak Diguna</i>             |                     | \$1000   |                        |
